What are energy storage and management technologies?

Energy storage and management technologies are key in the deployment and operation of electric vehicles (EVs). To keep up with continuous innovations in energy storage technologies, it is necessary to develop corresponding management strategies. In this Review, we discuss technological advances in energy storage management.

What are energy storage systems?

Energy storage systems are devices, such as batteries, that convert electrical energy into a form that can be stored and then converted back to electrical energy when needed, reducing or eliminating dependency on fossil fuels. Energy storage systems are central to the performance of EVs, affecting their driving range and energy efficiency.

How can energy storage management improve EV performance?

Energy storage management strategies, such as lifetime prognostics and fault detection, can reduce EV charging times while enhancing battery safety. Combining advanced sensor data with prediction algorithms can improve the efficiency of EVs, increasing their driving range, and encouraging uptake of the technology.

Does energy storage management improve battery safety?

In this Review, we discuss technological advances in energy storage management. Energy storage management strategies, such as lifetime prognostics and fault detection, can reduce EV charging times while enhancing battery safety.

What are battery management technologies & how do they help EVs?

Battery management technologies enable EVs to charge faster and more safely, and can also help with battery recycling at the end of an EV's life cycle. Embedded sensing and self-healing techniques of smart batteries enable more precise battery management.

Are energy storage systems safe?

Despite advances, energy storage systems still face several issues. First, battery safety during fast charging is critical to lithium-ion (Li-ion) batteries in EVs, as thermal runaway can be triggered by the reaction between plated lithium and the electrolyte at 103.9 °C after being fast charged by 3C (ref. 5).
