

Can the energy storage system exceed the transformer capacity

Which scheme has the best effect on energy storage and transformer capacity?

Therefore, scheme 3 (coordinated planning of energy storage and transformer capacity) has the best effect.

5.3.2. Economic benefit analysis of DES economic dispatching model

How to calculate capacity expansion cost of transformer?

Capacity expansion cost of transformer $F_{ex T}$, it can be expressed by Equation (28). Capacity expansion cost of transformer include two parts, one part is the transformer investment cost F_{ex} , it can be expressed by Equation (29), the other part is the transformer operation and maintenance cost $F_{T,OM}$, it can be expressed by Equation (30).

How to solve the problem of transformer overload?

In order to solve the problem of transformer overload, it is usually adopted to expand the capacity of transformer directly, but the limitation of this method is that the expansion part is only used at the moment of transformer overload and the investment cost of expansion is high .

How are energy storage capacity requirements analyzed?

First, the energy storage capacity requirements is analyzed on the basis of the transformer overload requirements, and analyzing the correspondence between different capacities of energy storage and transformer expansion capacities.

Can distributed energy storage solve the problems of uneven distribution?

Literature [10] proposed that distributed energy storage with its characteristics of flexible throughput power and fast response to energy, can effectively solve the problems of uneven distribution of DG in space and time and insufficient absorption capacity of distribution network.

What is the optimal allocation method for DES and transformer capacity?

A two-layer optimal allocation method for DES and transformer capacity is proposed to coordinate configuration of DES and transformer capacity. A DES location method based on the standard deviation of network loss sensitivity is proposed.

To address these challenges, this paper proposes an operational and planning strategy for hydrogen energy storage in distribution networks under dynamic transformer capacity expansion scenarios.
