What is a trolley-assisted Battery Charging System (TAS)?

The emerging trolley-assisted system (TAS), which facilitates dynamic battery charging during operation, reduces stationary charging intervals, and enhances operational throughput, has garnered increasing industrial interest.

Is trolley assisted D-MHT feasible?

The feasibility of trolley assisted D-MHT (TDT) had been analyzed through the economic evaluation based on the specific working conditions of the Aitik mine in Sweden (Lindgren et al., 2022). The production cost per tonne could be reduced by 44 % and the productivity can be boosted by 16 % compared the TDT to D-MHT.

Does a progressive extension of electrified infrastructure reduce battery aging costs?

Progressive extension of electrified infrastructure induces a systematic decline in battery aging costs (AC, Fig. 6 (a)), where battery downsizing enables capital cost reduction, which is a critical pathway for operational cost optimization in sustainable transportation infrastructure.
