Are energy storage systems a fire hazard?

However, like any electrical infrastructure, energy storage systems come with their own set of risks, particularly fire hazards. This is where the National Fire Protection Association (NFPA) 855 comes in. NFPA 855 is a standard that addresses the safety of energy storage systems with a particular focus on fire protection and prevention.

What are the fire and building codes for energy storage systems?

However, many designers and installers, especially those new to energy storage systems, are unfamiliar with the fire and building codes pertaining to battery installations. Another code-making body is the National Fire Protection Association (NFPA). Some states adopt the NFPA 1 Fire Code rather than the IFC.

Are energy storage systems safe?

Energy storage systems, while essential for grid stability and renewable energy integration, present unique challenges when it comes to fire safety. Issues like thermal runaway, short circuits, and the flammability of certain materials can result in fires that are difficult to manage due to the stored energy within the system.

What are NFPA 855 requirements for energy storage systems?

Electrical and Wiring Safety - Proper electrical wiring and connections are critical for fire safety in energy storage systems. NFPA 855 outlines specific requirements for cable management, grounding, and circuit protection to ensure that electrical components do not pose a fire risk.

What is the maximum energy rating per ESS unit?

The maximum energy rating per ESS unit is 20 kWh. The maximum kWh capacity per location is also specified--80 kWh when located in garages, accessory structures, and outdoors and 40 kWh in utility closets or storage spaces. For storage capacities that exceed these limits, non-residential requirements come into play (NFPA 855 Chapters 4-9).

Are there any problems with energy storage?

There have also been issues in the U.S. residential energy storage sector. For example, after five reported fires stemming from its RESU10 battery units, LG Chem issued product recalls in December of 2020 and again in August 2021. According to the Consumer Product Safety Commission, these fires resulted in property damage and one injury.
