When will energy storage become a large-scale development?

In March 2022, National Development and Reform Commission (NDRC) and National Energy Administration (NEA) released the 14th Five-Year Plan for the development of energy storage, which set the target for ES to enter the stage of large-scale development by 2025. The target calls for lower costs of ES.

What are the application fields of energy storage technologies?

In contrast, the application fields of the other four types of energy storage technologies are relatively limited. For example, electromagnetic EST has a fast response speed and is generally used for emergency power supply.

Are energy storage technologies passed down in a single lineage?

Most technologies are not passed down in a single lineage. The development of energy storage technology (EST) has become an important guarantee for solving the volatility of renewable energy (RE) generation and promoting the transformation of the power system.

What are the different types of energy storage technologies?

Energy storage technologies can be broadly categorized into five main types: mechanical energy storage, electrical energy storage, electrochemical energy storage, thermal energy storage, and chemical energy storage [ , , ]. Mechanical energy storage has a relatively early development and mature technology.

What are the economic impacts of energy storage technologies?

For instance, Johnson et al. evaluated the economic impacts of three energy storage technologies, namely Lithium-ion batteries, flywheels, and compressed air energy storage, using total cost of generation reductions to gauge the system value of each technology within a high-penetration renewable energy system.

Why should we study energy storage technology?

It enhances our understanding, from a macro perspective, of the development and evolution patterns of different specific energy storage technologies, predicts potential technological breakthroughs and innovations in the future, and provides more comprehensive and detailed basis for stakeholders in their technological innovation strategies.
