What does the European Commission say about energy storage?

In March 2023, the European Commission published a series of recommendations on energy storage, outlining policy actions that would help ensure greater deployment of electricity storage in the European Union.

What is the world's largest electricity storage capacity?

Global capability was around 8500GWh in 2020, accounting for over 90% of total global electricity storage. The world's largest capacity is found in the United States. The majority of plants in operation today are used to provide daily balancing. Grid-scale batteries are catching up, however.

Does India have a plan for battery energy storage?

In its draft national electricity plan, released in September 2022, India has included ambitious targets for the development of battery energy storage. In March 2023, the European Commission published a series of recommendations on policy actions to support greater deployment of electricity storage in the European Union.

Will battery energy storage investment hit a record high in 2023?

After solid growth in 2022, battery energy storage investment is expected to hit another record high and exceed USD35 billion in 2023, based on the existing pipeline of projects and new capacity targets set by governments.

How much money is invested in battery energy storage in 2022?

Global investment in battery energy storage exceeded USD20 billion in 2022, predominantly in grid-scale deployment, which represented more than 65% of total spending in 2022.
