Is energy management strategy important for fuel cell electric vehicles?

The proposed method shows a high efficiency and a low operating cost. Energy management strategy (EMS) is crucial in the growth of fuel cell (FC) electric vehicles (EVs) with different energy storage systems (ESS). This manuscript proposes a hybrid technique for the energy management (EM) of a battery-based FC electric vehicle (FCEV) system.

Can fuel cells be hybridized with other energy storage systems?

Even though fuel cells are an essential component producing clean energy for fuel cell electric vehicles, they can be hybridized with other energy-density or high-power energy storage system to improve their performance index .

Which energy storage sources are used in electric vehicles?

Electric vehicles (EVs) require high-performance ESSs that are reliable with high specific energy to provide long driving range . The main energy storage sources that are implemented in EVs include electrochemical, chemical, electrical, mechanical, and hybrid ESSs, either singly or in conjunction with one another.

Which energy storage systems are suitable for electric mobility?

A number of scholarly articles of superior quality have been published recently, addressing various energy storage systems for electric mobility including lithium-ion battery, FC, flywheel, lithium-sulfur battery, compressed air storage, hybridization of battery with SCs and FC ,,,,,,.

What type of batteries are used in energy storage devices?

For energy storage devices' EMS, FC batteries are used. They are crucial in the interplay between renewable energy sources and power grids and microgrids . HES with high specific power and specific energy include FC and VRLA, FC and NiMH, and FC and Li-ion . 3.6.4. Fuelcell-capacitor HES

Can EV batteries be used as energy storage devices?

Batteries in EVs can serve as distributed energy storage devices via vehicle-to-grid (V2G) technology, which stores electricity and pushes it back to the power grid at peak times. Given the flexible charging and discharging profiles of EVs and the cost reduction, V2G has been considered for short-term power grid energy storage 193.
