

# Grid tied storage system cost vs benefit calculation in Greece

How long should energy storage be in a Greek power system?

Considering the energy arbitrage and flexibility needs of the Greek power system, a mix of short (~2 MWh/MW) and longer (>6 MWh/MW) duration storages has been identified as optimal. In the short run, storage is primarily needed for balancing services and to a smaller degree for limited energy arbitrage.

How do electrical energy storage systems (EESS) differ from other ESS?

Electrical Energy Storage Systems Electrical energy storage systems (EESS) differ from other ESS because they do not involve any transformation from one form of energy into another. Instead, EESS stores energy in a modified electromagnetic field by using ultra-capacitors (UC) or superconducting electromagnets.

How can ESS improve the performance and profitability of electric grid applications?

To improve the performance and profitability of ESS for electric grid applications, future research should have a focus on developing decision-making tools for determining the storage technology, installed capacity, and operating strategy.

What are the costs and benefits of ESS projects?

Costs and benefits of ESS projects are analyzed for different types of ownerships. We summarize market policies for ESS participating in different wholesale markets. Energy storage systems (ESS) are increasingly deployed in both transmission and distribution grids for various benefits, especially for improving renewable energy penetration.

What are ESS grid applications?

At the same time, it is also important to classify grid applications of ESS by their working principles for gaining benefits. From the perspective of power systems, ESS contribute three types of resources: power regulation, energy storage and release, and capacity resource.

When will FTM grid-storage scheme be completed?

The 1st (out of 3) bidding process of the FtM grid-storage scheme (SA.64736) was successfully conducted in July 2023, for a total of 400 MW. The remaining 2 rounds will be completed in 2023. All projects are scheduled to enter operation before 2026.
