

Introduction to the international background of energy storage industry

Is the energy storage industry aligned with the industry's needs?

The country's policy and regulatory framework, while recognising the energy storage assets in the system, is yet to be aligned with the industry's needs. Fundamental regulatory changes are required in areas such as charges payable by the storage units or the tax incidence. Recent steps taken indicate progress.

How can energy storage support the global transition to clean electricity?

To support the global transition to clean electricity, funding for development of energy storage projects is required. Pumped hydro, batteries, hydrogen, and thermal storage are a few of the technologies currently in the spotlight.

What are energy storage regulations?

The regulations provide a basic definition of energy storage, its ownership, functions, and participation in providing services in the energy market. Further, the regulatory norms also describe the grid access for such capacities (in line with power generation) and allow for co-location with new or existing generation capacities.

What is the DOE energy storage program?

The goal of the DOE Energy Storage Program is to develop advanced energy storage technologies and systems in collaboration with industry, academia, and government institutions that will increase the reliability, performance, and sustainability of electricity generation and transmission in the electric grid and in standalone systems.

How is interconnection affecting the energy storage industry?

The provision of timely interconnection continues to be a systemic issue in the industry. This will impact the commercials for energy storage projects. As observed in the curtailment of capacities, the rising delays due to transmission constraints have already begun impacting the industry.

When will the energy storage project start?

The project is expected to secure permit applications in 2024, begin construction in 2025, and become operational by 2026 (Energy Storage News, 2024). The country's policy and regulatory framework, while recognising the energy storage assets in the system, is yet to be aligned with the industry's needs.
