

Japan's new energy storage requirements document

What is Japan's energy storage policy?

As policy, technology, and decarbonization goals converge, Japan is positioning energy storage as a critical link between its climate targets and energy reliability. Japan's energy storage policy is anchored by the Ministry of Economy, Trade and Industry (METI), which outlined its ambitions in the 6th Strategic Energy Plan, adopted in 2021.

What are Japan's Energy plans?

Japan's 6th Strategic Energy Plan (released in 2021) and the GX (Green Transformation) Decarbonization Power Supply Bill (released in 2023) target increasing the share of non-fossil fuel generation sources to 59% of the generation mix by 2030 compared with 31% in 2022.

Why does Japan formulate a strategic energy plan?

1. Background The Government of Japan formulates the Strategic Energy Plan under the Basic Act on Energy Policy to show the basic directions for Japan's energy policies.

What is Japan's 6th Strategic Energy Plan?

According to Japan's 6th Strategic Energy Plan, battery storage will be increased as a distributed source of electricity closer to end users and within microgrids. This new policy calls for an increase in installed solar capacity from 79 gigawatts (GW) in 2022 to 108 GW by 2030.

Will Japan achieve 45% renewable electricity by 2030?

With its updated energy storage policy, Japan aims to achieve 45% renewable electricity by 2030 while solving the ultimate puzzle: how to store sunshine and wind like canned tuna. Remember Fukushima? The site of nuclear disaster now hosts Asia's largest virtual power plant, combining:

How is Japan's energy storage landscape changing?

Japan's energy storage landscape is shifting, pushed by household demand, corporate ESG mandates, and domestic battery manufacturing. The residential lithium-ion market, projected to grow at a CAGR of 33.9% through 2030, remains one of the fastest-expanding segments.

Japan's energy storage policies, market statistics, and trends--from METI's strategic plans and subsidy programs to deployment challenges.

NEDO is a national research and development agency in Japan that creates innovation by promoting technological development necessary for realization of a sustainable society.

Although Japan's energy self-sufficiency rate has dropped from 20% to 11.3% after the Fukushima nuclear

Japan's new energy storage requirements document

accident in 2011, Japan is still determined to improve its energy ...

Ekus Energy COO Tom Best at a ceremonial event to mark the start of construction at the 30MW/120MWh Hirohara BESS in September 2024. Image: Ekus Energy Japan's energy storage market is experiencing ...

Japan's core policy was known as the "Sunshine Program," which aimed to research a range of "new energy" that included hydrogen along with solar, geothermal, coal, and nuclear power ...

THE RENEWABLE ENERGY TRANSITION AND SOLVING THE STORAGE PROBLEM: A LOOK AT JAPAN The rapid growth of renewable energy in Japan raises new challenges regarding ...

The Strategic Energy Plan is a policy document formulated by the Government under the Basic Act on Energy Policy, which entered into force in June 2002. For further ...

This is the first new energy storage supply-side policy document led by the Ministry of Industry and Information Technology. The content covers many aspects such as ...

This chapter discusses composition of power sources and the 6th Strategic Energy Plan, use of nuclear power and the GX promotion strategy, GX2040 vision and more.

But here's the catch: renewable energy needs reliable energy storage battery systems to balance supply and demand. Enter the booming market for certified energy storage ...

The Government of Japan formulates the "Strategic Energy Plan" to show the direction of Japan's energy policy. It is reviewed at least every 3 years in view of the latest energy situations at home and abroad, ...

The integration of renewable generation and energy storage in the power system has significant potential to mitigate undesirable characteristics of the power output such ...

SII's other areas of focus include zero-energy buildings and homes (ZEB, ZEH), energy efficiency programmes, building decarbonisation, electrolyzers, microgrids and more. For the scheme "Support for the ...

Technology costs for battery storage continue to drop quickly, largely owing to the rapid scale-up of battery manufacturing for electric vehicles, stimulating deployment in the power sector.

The targeted increase in renewable generation is paired with broad encouragement of battery storage. According to Japan's 6th Strategic Energy Plan, battery storage will be increased as a distributed source of ...

A total of 27 projects was awarded 34.6 billion yen in subsidies through METI's FY2024 program for supporting the expansion of renewable energy through introduction of energy storage, Sustainable Open ...

Japan's new energy storage requirements document

A total of 27 projects was awarded 34.6 billion yen in subsidies through METI's FY2024 program for supporting the expansion of renewable energy through introduction of energy ...

Mechanical energy storage technologies such as megawatt-scale flywheel energy storage will gradually become mature, breakthroughs will be made in long-duration ...

The Department of Energy's (DOE) Energy Storage Strategy and Roadmap (SRM) represents a significantly expanded strategic revision on the original ESGC 2020 Roadmap. This SRM ...

The BloombergNEF Tier 1 Energy Storage list is intended to inform buyers about which batteries and/or energy storage systems are being used in recently developed projects, but should ...

The 5th Strategic Energy Plan (Outline)(PDF:112KB) Structure of the 5th Strategic Energy Plan (PDF:248KB) The 4th Strategic Energy Plan English provisional ...

On 15 July, national plans for energy storage were set out by the Chinese National Development and Reform Commission and National Energy Administration. The main goals of new energy ...

Industry insiders believe that Document No. 136 is an innovative measure to implement the "Renewable Energy Law" and the "Energy Law" under the new circumstances. ...

On February 9, China's National Development and Reform Commission (NDRC) and National Energy Agency (NEA) jointly published the Notice on Deepening Market-Based ...

With 73% of its electricity still fossil-fuel dependent, the country's 2025 storage requirements read like a blueprint for energy resilience - imagine Tony Stark designing power grids instead of Iron ...

Is Japan advancing the introduction of renewable energy? Is Japan advancing the reconstruction of Fukushima? Is the restart of nuclear power plants making progress? How is the demand ...

At a Glance The Strategic Energy Plan is a compass for Japan's mid- to long-term energy policy, navigating the balance between energy security, economic efficiency, environmental sustainability, and safety ("S+3E").
...

With renewable energy accounting for 38% of the national grid (up from 22% in 2020), the island nation faces mounting pressure to stabilize its power supply. But how exactly does energy ...

Battery energy storage systems ("BESS") are playing an increasingly important role in the transition towards net zero. However, the regulations for BESS in Japan were generally ...
