Is energy storage a profitable business model?

Although academic analysis finds that business models for energy storage are largely unprofitable, annual deployment of storage capacity is globally on the rise (IEA,2020). One reason may be generous subsidy support and non-financial drivers like a first-mover advantage (Wood Mackenzie,2019).

How do business models of energy storage work?

Building upon both strands of work, we propose to characterize business models of energy storage as the combination of an application of storage with the revenue stream earned from the operation and the market role of the investor.

What is a energy storage revenue stream?

The revenue stream describes the type of income a storage facility can generate from its operation. Table 1 provides a list and description of eight distinct applications derived from previous reviews on potential applications for energy storage (Castillo and Gayme,2014; Kousksou et al.,2014; Palizban and Kauhaniemi,2016).

How would a storage facility exploit differences in power prices?

In application (8),the owner of a storage facility would seize the opportunity to exploit differences in power prices by selling electricity when prices are high and buying energy when prices are low.

Is a set of commercially available technologies sufficient to perform all business models?

Our review shows that a set of commercially available technologies is sufficient to perform all identified business models. We also find that matches appear to have approached a tipping point toward profitability. Yet,this conclusion only holds for matches that either have been examined since 2017 or entail multiple business models.

How can energy storage be profitable?

Where a profitable application of energy storage requires saving of costs or deferral of investments,direct mechanisms,such as subsidies and rebates,will be effective. For applications dependent on price arbitrage,the existence and access to variable market prices are essential.

In the first half of 2023, the domestic energy storage sector experienced a boost, propelled by the continued expansion of wind and solar power installations and a decline in energy storage ...
