Will Spain be able to deploy large-scale electricity storage?

The European Commission has approved a new aid scheme that will allow Spain to deploy large-scale electricity storage, both in hybridisation with renewable energy facilities and stand-alone and thermal.

Why should Spain invest in energy storage?

Investing in energy storage helps Spain meet its climate goals. This includes achieving carbon neutrality by 2050. Storing renewable energy instead of wasting it helps the country rely less on fossil fuels. This also cuts down greenhouse gas emissions. Pumped hydro, thermal storage, and battery systems are effective technologies.

What is Spain's regulatory framework for energy storage?

Spain's regulatory framework for BESS is set in its Strategy for Energy Storage. The Strategy identifies the required regulatory measures - such as grid access, market structure, and addressing double tolling - that are currently needed to ensure the deployment of a solid energy storage market.

How would retail charges affect LCOH for electric boilers?

Retail charges would also apply to electric boilers. For the electric boilers case, providing same thermal output as this TES, LCOH would be increased by 9.5 EUR/MWh. Namely, from 43 EUR/MWh (lower case) to 52.5 EUR/MWh and from 47 EUR/MWh (high case) to 56.5 EUR/MWh. This is comparable with the 67 EUR/MWh LCOH for the TES with retail charges.
