What is a sodium ion battery?

Sodium-ion batteries provide comparable energy density to lithium-ion batteries, enabling efficient energy storage with reduced space requirements. They operate across a wider temperature range, minimizing cooling and heating needs, and offer greater longevity.

Is Australia a good place to buy a sodium-ion battery?

The Australian market, with its significant mining, agriculture, and logistics sectors, presents a prime opportunity for sodium-ion battery adoption. While the sodium-ion battery Australia market is still emerging compared to the more established lithium-ion sector, the groundwork is being laid. Key Considerations for Australian Buyers:

How much will sodium ion batteries cost in 2024?

Average sodium-ion cell prices were around \$87/kWh in early 2024, with projections to fall below \$40/kWh at the cell level (around \$50/kWh at the pack level) by 2030. This trajectory could make them highly competitive with LFP batteries, whose pack prices are also declining (projected by some to be around \$60-\$70/kWh by 2030).

Are sodium ion batteries a good choice?

If you're in need of faster recharge times, lighter battery weight, or greater space efficiency, sodium-ion batteries are a perfect fit. However, if your energy demands are minimal, and you rely primarily on powered sites, this investment may not be necessary.

How much does a sodium ion battery cost per kWh?

Industry analysts, including those at BloombergNEF, project a significant decrease in sodium-ion battery cost per kWh. Average sodium-ion cell prices were around \$87/kWh in early 2024, with projections to fall below \$40/kWh at the cell level (around \$50/kWh at the pack level) by 2030.
